

FEED THE CHILDREN, KENYA

📅 19 Sep 2022

2022-09-19

Summary

This evaluation assessed whether Feed the Children's objectives among the adolescent girls were being achieved. The study targeted girls aged between 10 and 19 years old, in and out of school, who had received food consumption and reproductive health messages in their schools through health club activities or from the peer-to-peer groups within their communities where mothers learn how to practice optimum nutrition behaviours.
