🌻 Do not use causal mapping if you have limited data or want precise models or specific causal links

> From Better Evaluation.

Causal mapping is less frequently used to analyse quantitative data or to do precise mathematical modelling, e.g. of future states of a system under certain conditions.

❌ Do not use causal mapping if you ...

- don't place high value on the views of the sources
- only have a relatively small map which you can manage with traditional tools for drawing network diagrams (e.g. PowerPoint, kumu.io etc.)
- need to analyse quantitative data and/or need to do precise mathematical modelling, e.g. of future states of a system under certain conditions
- would like to just sketch out a plan (e.g. Theory of Change or similar) without much reference to the different sources underpinning each link
